

A conference in honor of the 60th birthday of Peter Olver

# Symmetries of Differential Equations: Frames, Invariants and Applications

May 17-20, 2012 (Thursday-Sunday)

[www.math.umn.edu/conferences/olver](http://www.math.umn.edu/conferences/olver)

## Confirmed Speakers

Ian Anderson (Utah State University)  
John Ball (University of Oxford)  
Mireille Boutin (Purdue University)  
Mark Fels (Utah State University)  
Artemio González-López (Universidad Complutense de Madrid)  
Darryl Holm (Imperial College)  
Evelyne Hubert (INRIA)  
Arieh Iserles (University of Cambridge)  
Irina Kogan (North Carolina State University)  
Stéphane Mallat (École Polytechnique and Courant Institute)  
Robert Milson (Dalhousie University)  
Elizabeth Mansfield (University of Kent)  
Sheehan Olver (University of Sydney)  
Juha Pohjanpelto (Oregon State University)  
Philip Rosenau (Tel-Aviv University)  
Allen Tannenbaum (Boston University)  
Keti Tenenblat (Universidade de Brasília)  
Francis Valiquette (Dalhousie University)  
Pavel Winternitz (Université de Montréal)

The conference will assess the present state of knowledge in the wide ranging but coherent research fields in which Peter has been involved and celebrate his profound influence on these fields through his books and papers and, especially, through an amazing number of students, postdocs and collaborators.

A National Science Foundation grant and additional funds are available to financially support selected participants. Junior researchers and members of underrepresented groups are particularly encouraged to apply for support.

Organizers: Niky Kamran (McGill University), Gloria Mari Beffa (University of Wisconsin), Willard Miller (University of Minnesota), and Guillermo R. Sapiro (University of Minnesota).
