
Quantitative Finance is a cross-disciplinary field merging the disciplines of Mathematics, Statistics & Computer Science, and Finance, where analysts model the inherent uncertainty associated with financial markets.

The UMN's MFM, in the School of Mathematics, is where many quantitative students build the knowledge, skills and network required to work in the field.

Attend and learn more about:
- University of Minnesota’s (UMN’s) MFM Program
- Quantitative risk modeling, analysis, optimization, validation, hedging, investment, trading and more!
- What MFM alumni/quants do in their daily jobs

COMPLEMENTARY APPETIZER/DESSERT
